A FUTURE-PROOF
MONOCULAR LINE

F.A.I.R.'s Fossari at IWA

Visit Italian shotgun manufacturer F.A.I.R. at this year's IWA show and you'll be excited by the quality of the company's new line of Fossari shotguns.

F.A.I.R. has concentrated all of its 50 years of manufacturing experience, design and expertise to conceive its latest over-and-under masterpiece, a shotgun designed to compete and win at the highest level.

The fresh Fossari line, that you can take a look at over on IWA stand #1-615, integrates the most advanced technological solutions in a shotgun featuring the Boss locking system, which focuses on size, balance and weight. Everything has been analysed with the utmost precision to meet the technical needs of any shooter, be it novice or professional.

The idea of creating the Fossari line stems from the need to create a shotgun that was designed and conceived for shooting champions – shooters who have been practising diligently and who are looking for a shotgun specifically designed for their needs. Fossari has been purposely designed to bring its buyers to a higher level and to ensure that the shotgun leads them to performance and

concentration, both key skills that the sport requires.

The team at F.A.I.R. says that the new Fossari shotgun "... is a flawless blend of tradition and technology." The cutting-edge technological solutions and elegant design make it an exceptional shotgun for competitive shooting and it's certainly worth taking time out of your IWA schedule to take a look.

F.A.I.R. technology

XBD system: In all the Fossari models the trigger mechanisms are removable. The operation is easily performed without tools. Simply press the release button located in the upper part of the trigger unit. This simplification of the process, in addition to offering an obvious technical advantage, greatly improves the maintenance phases of the shotgun.

TREX: The iron forend provided with numbered interchangeable insert (made from special steel). They interchange at the support

point between the barrel tenon and the iron forend itself, allowing the shooter to easily tighten any excess tolerances that arise from high usage of the shotgun.

IRF: All Fossari models are made with an interchangeable insert in the breech made of hardened and chromed steel. This ensures maximum durability of the weapon both against wear and corrosion generated by ammunition gases.

X-CONES, XR-TRIGGER, XR-STOCK, XBORES and much more...

There is a Fossari shotgun designed for each type of competitive shooting: TRAP, SKEET and SPORTING versions. If you want to achieve maximum versatility in a competition shotgun, the Fossari Sporting BSR model is the shotgun you are looking for. Stocked in Montecarlo style wood, with XR-STOCK® adjustable stock, adjustable single trigger (optional) and adjustable top rib, made of resistant light alloy, which

allows you to change the point of impact on the target. These are some of the technological features of this splendid model.

About

Since its creation in 1971, F.A.I.R. has been committed to an intensive research and development program and to the use of the latest technology and materials in the manufacturing of its shotguns. This focus on technical innovation, while still following the centuries old gun manufacturing traditions of Northern Italy, is a key element of the company's success in creating functional and highly reliable sports and hunting shotguns.

F.A.I.R. shotguns are designed in partnership with its clients across the globe and are, therefore, specially attuned to the requirements of different hunting and competition disciplines.
